AnyDesk Update 9.6.1: New Features and Essential Bug Fixes for Enhanced Performance

The AnyDesk update on September 11, 2025 (version 9.6.1 for Windows) introduces several exciting new features and important fixes.

New Features:

- A built-in assembly chat has been added within AnyDesk sessions, enhancing communication between users while utilizing the application.

Bug Fixes:

- A recording and playback issue affecting customized network drive paths has been resolved.
- Crashes occurring when launching and closing the application, as well as during log-off, have been fixed.
- Issues within AnyDesk One have been addressed.
- A bug where the connection status in trace appeared incorrectly while using two-factor authentication (2FA) has been corrected.

Other Changes:

- The quality of translations has been improved, contributing to a better user experience for speakers of various languages.

Overall, this update aims to enhance the application's performance and stability while incorporating useful new functionalities for users.
