AnyDesk Update 9.6.4: Key Bug Fixes for Enhanced Remote Access Experience

In the October 30, 2025 update for AnyDesk (version 9.6.4 on Windows), several important bug fixes were introduced to enhance the overall user experience.

One of the key highlights was the resolution of an issue that affected the chat functionality, which previously did not work correctly when the client was licensed with a key. This fix ensures that users can now communicate seamlessly during their remote sessions.

Additionally, enhancements were made for local users, allowing them to type correctly while connected via AnyDesk One, thus improving their workflow and interaction while remote.

Furthermore, a critical issue causing the application to close unexpectedly due to the “desk_rt_ipc_error” was addressed.

These updates aim to optimize the performance and usability of AnyDesk, providing users with a smoother and more efficient remote access experience.
