AnyDesk Update 9.7.10: Enhanced Video Quality, Bug Fixes, and UI Improvements

TABLE OF CONTENT

New Features and Bug Fixes in the AnyDesk Update 9.7.10

New Features and Bug Fixes in the AnyDesk Update 9.7.10

New Features:

- In AnyDesk One Meeting, the incoming video quality now automatically adjusts based on each user's tile size, enhancing the overall experience during meetings.

Bug Fixes:

- A problem was resolved where the "Block Device" option did not function correctly after a session.
- Crashes that affected the app's stability have been fixed.
- Security vulnerabilities have been addressed to strengthen user protection.
- An issue impacting user capacity limits has been resolved.
- The functionality for closing pop-up windows and dialogs using the Esc key or by clicking outside them has been improved.

Other Changes:

- The user interface of the main AnyDesk One window has been enhanced.
- The chat interface in AnyDesk One has received significant improvements.

This update is focused on optimizing the user experience while ensuring the application's stability and security.
