Android Control Plugins for AnyDesk

TABLE OF CONTENT

What if my device doesn't have a plugin?

Available control plugins

To enable input control on Android devices, AnyDesk uses control plugins. These plugins allow the remote user to interact with your Android device during a session.

> 🚨 **IMPORTANT**
>
> Do not manually search for or install control plugins. AnyDesk will automatically detect and install the appropriate plugin when prompted. This ensures the best compatibility and avoids potential issues.

What if my device doesn't have a plugin?

If your device does not have a dedicated control plugin and the general-purpose `adl` plugin doesn't meet your needs, we recommend contacting your device manufacturer. They can reach out to AnyDesk directly to request the creation of a dedicated plugin.

Available control plugins

The table below lists all current control plugins supported by the AnyDesk Android client:

 © 2026 www.somehelpwith.com
