Some Help With

How do I check the history of connections on AnyDesk? Paid version

This is a premium feature, so you need a license and access credentials to my.anydesk.com:

Here's how to view your connection history in AnyDesk:

1. Open my.anydesk.com and login.
2. Click on "Clients."
3. Locate the name of the computer you have been connecting to and click on it to select it.
4. At the bottom, you will see the history of the connections established with that device.
5. This will show you a log of all the connections made to that computer, including the date and time of each connection.
