Some Help With

AnyDesk 7.4.0 for Android: Unattended Access Enhancements & Key Bug Fixes for Improved Remote Collaboration

On March 6, 2025, AnyDesk introduced version 7.4.0 for Android, packed with exciting new features and essential bug fixes. One of the standout enhancements is the ability for AnyDesk to accept incoming sessions through unattended access, even when another application is pinned on the screen. This improvement will significantly streamline remote access experiences for users.

In terms of bug fixes, this update addresses an issue that previously prevented the disabling of session recording in custom clients, along with a minor error that occasionally caused the AnyDesk ID to change on certain devices. Additionally, several minor adjustments have been made to improve the overall stability and performance of the application.

Explore these new features and experience the enhanced functionality of AnyDesk for Android. Whether or not you are already familiar with AnyDesk's offerings, this update is designed to make your remote collaboration smoother and more efficient. Keep your device updated to enjoy the best performance!
