AnyDesk 8.0.0 Update for iOS: Bug Fixes, New Features, and Enhanced User Experience

TABLE OF CONTENT

- Bug Fixes:
- New Features:
- Additional Changes:

In the update of AnyDesk on November 6, 2025, version 8.0.0 for iOS, several bug fixes and new features were introduced, enhancing the overall user experience.

Bug Fixes:

- Resolved issues related to touch events during sessions on mobile devices, ensuring smoother interactions.
- Improved automatic resizing behavior and dimension resets for a more seamless experience.
- Made various adjustments and corrections to the user interface for enhanced usability.

New Features:

- The introduction of user account options allows for personalized usage and management.
- A new address book has been added, streamlining contact management for users.
- Users can now play session recordings from external sources, adding flexibility to how sessions are reviewed.
- Deep linking has been implemented, making navigation within the app more intuitive.

Additional Changes:

- OpenGL has been replaced with Metal, which may enhance graphical performance, providing a better visual experience.
