AnyDesk 8.1.0 Update for Raspberry Pi and Linux: Enhanced User Experience and Bug Fixes

The AnyDesk update released on September 23, 2026, introduces version 8.1.0 for Raspberry Pi and Linux, bringing a range of enhancements and bug fixes that aim to enrich user experience.

What's New:

- The main window has been redesigned to improve the overall user experience, making navigation more intuitive and efficient.
- The implementation of the @everyone mention function allows for more effective communication among users, streamlining collaboration in real-time.
- A new option to manually select the online connection status has been added, providing users with greater control over their availability.
- User-friendly presence indicators have been introduced for individuals with color blindness, ensuring accessibility and ease of use for all users.

Bug Fixes:

- A critical issue has been resolved where horizontal mouse scroll events were not being injected properly, enhancing the reliability of scrolling actions.
- A freezing issue in the acceptance window when reconnecting a monitor has been fixed, preventing interruptions in user workflow.

These enhancements and bug fixes are designed to optimize the performance and usability of AnyDesk on the specified platforms, ensuring that users can enjoy a seamless and efficient remote access experience.
