AnyDesk Update: Version 9.5.11 Released on August 1, 2025

The latest update for AnyDesk, version 9.5.11 for Windows, brings a host of bug fixes and enhancements that aim to improve the overall user experience. This significant update addresses several issues that users have encountered, making remote desktop sessions smoother and more reliable.

Key Fixes

- **Audio Recording Issue Resolved**: Users previously faced challenges with audio recording during session captures. This update resolves that issue, ensuring that all audio is properly recorded for future reference.
- **Screen Display Problems**: There was a persistent problem where the screen appeared black when activating the screen frame on specific versions of Windows. This critical bug has been fixed, enhancing visibility during sessions.
- **Permission Profiles Localization**: The update corrects a flaw affecting the accurate localization of some predefined permission profiles, allowing users to navigate with ease and ensuring the system operates as intended.

Visual Improvements

Moreover, the update brings visual enhancements to the address tile elements, providing a more intuitive and aesthetically pleasing interface. These improvements not only enhance functionality but also contribute to a more engaging user experience.

With these updates, AnyDesk continues to refine its remote desktop application, ensuring it meets the needs of users globally. For those seeking reliable and user-friendly remote access solutions, keeping this software updated is essential.
