AnyDesk 9.6.1 Update for macOS: Key Bug Fixes and Enhanced User Experience

The update on December 16, 2025, for AnyDesk version 9.6.1 on macOS brings several significant bug fixes aimed at enhancing user experience. One of the key improvements addresses the “Start AnyDesk at Logon” option, providing users with easier and quicker access to the application upon login. Additionally, the reliability of the remote restart feature has been improved, ensuring a more stable operation when rebooting connected devices. Furthermore, enhancements have been made to the compatibility with dark mode in the acceptance window, optimizing the visual experience for users who prefer this setting.
