AnyDesk 9.6.5 Update: New Features and Bug Fixes for Enhanced User Experience

TABLE OF CONTENT

- Notable Bug Fixes
- New Features

The AnyDesk update released on November 12, 2025 (version 9.6.5 for Windows) brings a host of bug fixes and exciting new features aimed at enhancing user experience.

Notable Bug Fixes

Among the significant fixes, users will appreciate the resolution of an issue that caused crashes when accepting connections on slower devices. Additionally, deleted messages have been updated in the pinned posts view, while notifications for banned users have been eliminated. Other improvements include resolving a problem with tooltip display in the chat header and fixing a bug that resulted in crashes when uploading user images.

New Features

This update introduces a new error message related to the address book limit, improving clarity for users. The ability to paste images directly from the clipboard has been implemented, making it easier to share visuals during chats. Furthermore, error dialog boxes have been added in the chat for better communication regarding issues, along with the integration of first and last names from my.anydesk.com into the chat interface.

Navigation within the file explorer has also seen improvements, now automatically opening in the most frequently used directory, which enhances workflow efficiency. Additionally, a process table for monitoring has been incorporated, and several stability improvements have been made to enhance connection consistency and user interface design.
