AnyDesk 9.7.16 Update: New Features, Bug Fixes, and Enhanced User Experience

The AnyDesk update released on September 21, 2026 (version 9.7.16 for Windows) introduces several enhancements and critical bug fixes.

New Features:

- An **Interactive Onboarding** experience has been implemented to streamline the journey for new users.
- In **AnyDesk One Meeting**, users now have the option to hide their own video window during meetings, allowing for a more focused discussion.

Bug Fixes:

- Resolved an issue where the chat popup menu was positioned incorrectly.
- Fixed a glitch that kept the Copy popup menu visible after closing the main menu.
- Addressed an issue that could occasionally cause the Acceptance window to freeze.
- Corrected a bug that resulted in the wrong screen being opened.
- In **AnyDesk One Meeting**, a problem where the video from a client using a webcam that does not support HD resolutions was not displaying correctly has been rectified.

Additional Changes:

- The user interface of the whiteboard feature has been enhanced for better usability.

These updates aim to provide a smoother and more efficient experience for AnyDesk users, ensuring that every interaction is seamless and productive.
