AnyDesk 9.8.0 Release: New Features, Bug Fixes, and Enhanced User Experience

On September 29, 2026, AnyDesk released version 9.8.0 for Windows, introducing numerous enhancements and bug fixes aimed at improving user experience.

New Features:

- Support for the drag-and-drop feature has been enhanced for more seamless interaction.
- In the AnyDesk One meeting function, the active speaker is now highlighted more prominently with a more visible color.
- The meeting ID in AnyDesk One is now displayed in a clear textual format for easy reference.
- A red dot has been added to the menu icon to indicate that the user is currently in a meeting, ensuring better awareness of ongoing activities.

Bug Fixes:

- Resolved issues that occurred when activating the Discovery feature through the tile.
- Fixed an unexpected crash that would occur when cancelling a file transfer while logging off.
- Addressed a problem that caused interruptions in file transfers when switching between sides.
- Rectified the absence of the “Install Printer” checkbox in the installation window.
- Corrected the unresponsiveness of the 2FA checkbox in the security settings.
- Fixed an error in the AnyDesk One meeting information panel that incorrectly displayed a regular participant as a host.
- Resolved an inconsistency with the “mute all” button in the AnyDesk One meeting feature, ensuring it functions reliably.

Other Changes:

- The user interface of AnyDesk One has been improved for a more intuitive user experience.

These updates are designed to enhance the functionality and stability of the application, providing a more intuitive experience during meetings and ensuring smoother operations.
