AnyDesk for Android February 2026 Update: New Features and Bug Fixes for Enhanced User Experience

On February 23, 2026, AnyDesk for Android received a range of exciting new features and bug fixes that enhance user experience.

New Features:

- Support for a new plugin has been added, expanding the app's capabilities and allowing users to leverage enhanced functionalities.

Bug Fixes:

- Error messages have been implemented to notify users when the address book limits are reached.
- Issues related to audio streaming have been resolved, particularly when audio permissions are revoked and then re-granted.
- Minor stability issues within the application have been corrected, ensuring a smoother experience.
- Adjustments were made to improve compatibility with the AnyDesk One chat feature.
- A correction was made for an autocorrect issue in the GBoard keyboard.
- The user list view has been optimized to enhance usability on mobile devices.

This update focuses on improving functionality and stability, ensuring that users can enjoy a more seamless and reliable experience with the application.
