Linux Updates (Version 6.4.0)

- New Features:
- Bug Fixes:
- User Benefits:

In November 2024, AnyDesk rolled out several significant updates for both Android and Linux platforms, enhancing functionality and addressing critical bugs that impact user experience.

Android Updates (Version 7.2.0)

New Features:

- The user experience (UX) has been streamlined for first-time application launches, with fewer pop-ups to navigate through.
- A new file manager has been integrated, allowing users to manage files during remote sessions with convenient drag-and-drop support on wide-screen devices.
- Picture-in-picture mode is now enabled automatically on devices running Android 12 and later when the home button is pressed during a session.
- Users can now access AnyDesk's tracking file directly within the app for better session management.

- A password confirmation field has been added for setting or changing passwords to enhance security.
- Unattended access has been improved, providing current permissions information on the system for better transparency.

Bug Fixes:

- Various issues causing crashes and interface problems have been resolved, including connection errors, session disruptions, and challenges related to file and password management.

User Benefits:

These updates significantly enhance the usability of AnyDesk, particularly for first-time users. The improved file management and unattended access features ensure a smoother and more efficient experience, essential for individuals requiring quick, hassle-free access to remote devices.

Linux Updates (Version 6.4.0)

New Features:

- Migration from GTK2 to GTK3 has modernized the user interface and improved compatibility, providing a more cohesive experience for users.

Bug Fixes:

- Numerous issues have been addressed, including permission errors in the acceptance window, session recording failures, and file transfer problems. Minor UI glitches have also been resolved.

User Benefits:

These enhancements ensure a more stable and reliable experience on Linux, minimizing disruptions and allowing users to focus on their tasks without technical concerns. The updated interface gives the tool a contemporary and professional feel.

Overall, the updates in November 2024 for AnyDesk reinforce its position as a leading remote control tool, making the user experience more intuitive while resolving issues that could hinder productivity. This makes AnyDesk a compelling choice for those seeking reliable remote connectivity solutions.
