AnyDesk November 2026 Update: New Features and Fixes for Raspberry Pi, Linux, and Windows

TABLE OF CONTENT

Raspberry Pi and Linux:

Windows:

The AnyDesk update released on November 19, 2026, brings a host of new features and bug fixes across various platforms: Raspberry Pi, Linux, and Windows.

Raspberry Pi and Linux:

Both platforms received version 8.1.1, which includes the following fixes:

- Resolved an issue related to device freezing at the end of a session.
- Added the “Logout User” option within the permissions profile.
- Fixed a problem affecting the rendering of the remote shell panel.
- Addressed scaling issues within the Wayland interface.
- Corrected an issue regarding the maximum file size limit for trace files.

Windows:

The Windows version 9.8.4 was also updated with significant fixes, including:

- Addressed license update issues with “Force Logout.”
- Resolved user interface problems in “Force Login” when opening a new tab.
- Enhanced the ability to add entries in the contact agenda through copy and paste, even if the option is disabled.
- Fixed crashes that affected the stability of the application.

Additionally, AnyDesk’s translations have been improved, and the account interface has been optimized for better usability.
