AnyDesk Standard vs TeamViewer Premium: The Cost-Effective Remote Access Solution for Teams

TABLE OF CONTENT

Pricing: Greater Value at Lower Cost

Scalability: Concurrent Channels and Simultaneous Connections

Mobile Device Control: No Extra Cost

Device Management for Unattended Access

Additional Features: Session Recording and File Transfer

If you lead a team in need of an advanced and scalable remote access solution, choosing between **AnyDesk Standard** and **TeamViewer Premium** may initially seem overwhelming. However, upon closer examination of features and pricing, **AnyDesk Standard** clearly emerges as a more cost-effective option without sacrificing quality or flexibility. In this article, we delve into the advantages of AnyDesk Standard over TeamViewer Premium, focusing on key elements such as mobile device control, concurrent channels, and simultaneous connections.

Pricing: Greater Value at Lower Cost

One of the standout features of **AnyDesk Standard** is its **significantly lower cost** compared to **TeamViewer Premium**. While both tools offer robust functionalities, AnyDesk stands out as a more accessible alternative for organizations looking to achieve a high return on investment. Despite its affordability, AnyDesk does not skimp on features, making it a superior choice in terms of value.

The lower pricing structure of AnyDesk makes it ideal for organizations seeking a scalable solution without straining their budget, particularly when managing a large number of devices or supporting multiple simultaneous connections.

Scalability: Concurrent Channels and Simultaneous Connections

A key difference between **AnyDesk Standard** and **TeamViewer Premium** lies in the ability to manage multiple sessions and users simultaneously. **AnyDesk** provides up to **20 concurrent channels**, allowing your team to handle several connections at once, ensuring that workflow remains uninterrupted. In contrast, **TeamViewer Premium** offers less flexibility, limiting your team's scalability options.

Furthermore, with AnyDesk, each technician can manage up to **15 simultaneous connections**, granting them substantial flexibility in addressing various clients or devices concurrently. **TeamViewer Premium**, however, allows only **10 simultaneous connections** per technician, which could be a constraint for teams that need to manage multiple systems efficiently. AnyDesk's capacity to handle more simultaneous connections enhances productivity and optimizes technicians' time.

Mobile Device Control: No Extra Cost

AnyDesk Standard also excels in offering **mobile device control at no additional cost**. This functionality is crucial for support teams needing to provide assistance on devices such as smartphones and tablets. In comparison, **TeamViewer Premium** does not include mobile device control by default and requires additional fees to enable this feature, which can lead to significant expenses for teams that frequently work with mobile devices.

For organizations seeking a comprehensive remote support solution that encompasses both desktop and mobile devices, AnyDesk provides greater flexibility and convenience without the extra costs imposed by TeamViewer.

Device Management for Unattended Access

When it comes to managing devices for unattended access, **AnyDesk Standard** offers a substantial advantage over **TeamViewer Premium**. With AnyDesk, you can configure up to **500 devices** for remote access without the need for user intervention, making it ideal for organizations with multiple offices, branches, servers, or clients that require ongoing support. In contrast, **TeamViewer Premium** permits the configuration of only **300 devices**, which may limit growing organizations or those with extensive IT infrastructure.

Unattended access is vital for teams that need to intervene on devices outside of regular hours or without requiring a user to be present. By allowing access to up to 500 devices, AnyDesk facilitates

greater management capacity, ensuring efficient oversight of your infrastructure.

Additional Features: Session Recording and File Transfer

AnyDesk Standard not only offers greater scalability but also incorporates advanced functionalities that simplify the work of the support team. **Session recording**, for example, is a valuable tool for documenting interactions with clients, beneficial for both audits and internal training. Additionally, the ability to **transfer files** quickly between devices during a remote session enhances productivity and aids in problem resolution.

While **TeamViewer Premium** also includes these features, **AnyDesk** provides them at a lower price point, reinforcing its standing as a more cost-effective solution without sacrificing functionality. Session recording and file transfer are essential components for teams that require comprehensive control during remote sessions and wish to document every step to ensure quality support.

If you are in search of a remote access solution that includes mobile device control without extra charges, detailed reporting, and advanced features like session recording, **AnyDesk Standard** is undoubtedly the best choice. With lower costs and a greater capacity for device management, AnyDesk presents the ideal alternative for organizations seeking to maximize efficiency and minimize expenses on remote support solutions.
