AnyDesk Update 23.12.2025: New Features, Bug Fixes, and Usability Improvements

TABLE OF CONTENT

Summary of Features and Fixes in the AnyDesk Update (23.12.2025)

Summary of Features and Fixes in the AnyDesk Update (23.12.2025)

New Features:

- A navigation bar has been implemented in the monitoring section, displaying the online status.
- A quick delete option has been added for chat attachments.
- A “Back” button has been integrated to facilitate navigation back to the channels list.

Bug Fixes:

- Enhanced security in audio settings.
- Resolved an issue causing the window to move to another monitor when entering full-screen mode.
- Fixed a bug where the client interface displayed an outdated license after the expiration of a reverse trial.
- Addressed a crash that led to unexpected termination of AnyDesk.
- Corrected an issue that allowed multiple services to start simultaneously.
- Resolved focus problems during remote reboot with credentials.
- Ensured that live updates start and stop correctly when the online status of a monitored device changes.
- Fixed various minor user interface issues in dark mode.
- Corrected the absence of a Server tab in chat settings after login.
- Resolved an empty notification banner appearing when sending messages with only emojis.
- Fixed the absence of a download details popup after re-logging into the chat.
- Addressed an issue that prevented starting calls through the chat.

- Corrected a problem where the message input field was not focused after closing the file explorer.
- Fixed a bug that hindered closing the app version dialog.
- Resolved a bug when closing tabs.
- Improved misleading warnings regarding uploads in message editing mode.
- Fixed an issue where the download details popup obstructed scrolling.
- Corrected the incorrect appearance of the download details popup after re-entering the chat.
- Resolved an incorrect assignment of the server creator role upon login.
- Fixed a problem where the new message indicator did not appear after logging in.
- Corrected the visibility issue of the bottom of the members popup window.
- Enhanced the visibility of avatars and usernames in the “Add Members” popup.
- Resolved crashes in the download details popup when restarting a download in the chat.

Other Changes:

- Improved overall chat usability.
- Removed the download progress bar from the file preview in the chat.
- Modified the user account popup behavior to direct users to my.anydesk.
- Reorganized user roles in group chats.
- Redesigned the general dialogue in the chat.

This update brings significant enhancements to the functionality and user experience in AnyDesk, focusing on chat stability and usability.
