AnyDesk Update 8.0.4 for Android: Key Enhancements and Bug Fixes You Need to Know

The AnyDesk update released on July 29, 2025 (version 8.0.4 for Android) brings several bug fixes and performance enhancements. Here are the key highlights of this update:

- The on-screen keyboard opening during outgoing sessions to Windows devices has been improved, ensuring that it displays more reliably when text input is required.
- AnyDesk will no longer run in the background after the device starts unless necessary, optimizing resource usage.
- Issues related to chat scrolling when the keyboard is open and message sending after reconnection have been resolved.
- A bug that displayed an incorrect remote directory path in the file manager after granting permissions has been fixed.
- Connection speed has been enhanced when returning to the app from the foreground.
- A problem that prevented the reconnection button from being clickable via TV remote control has been addressed, and now it is possible to add quick access items to favorites using this control.
- Additional minor improvements and fixes have been made to enhance the overall stability of the application.

These modifications aim to improve the user experience and increase the efficiency of using the application.
