AnyDesk Update 9.6.0 for macOS: New Features, Bug Fixes, and Enhanced User Experience

Summary of New Features and Bug Fixes in AnyDesk - Update on November 21, 2025 (version 9.6.0 for macOS)

This update for AnyDesk introduces several new features and enhancements for the macOS version. Notably, a search function has been added to the settings, making it easier to navigate and adjust preferences. Additionally, users can now enable a sound notification for incoming session requests, which enhances accessibility and responsiveness. The update also includes the capability to monitor CPU and RAM usage on macOS devices via the AnyDesk One RMM widget, allowing users to manage their resources more effectively.

Regarding bug fixes, a specific issue with the Cmd-H command, which previously caused the AnyDesk One window to hide, has been addressed. Furthermore, improvements have been made to the behavior of the auto-hide feature for session acceptance windows. Translation quality has been refined, and a compatibility issue concerning the server for the AnyDesk One chat widget has been resolved. Lastly, minor adjustments have been made to the user interface to enhance the overall experience.

In summary, this update significantly improves both the functionality and stability of AnyDesk on macOS.
