AnyDesk Update 9.6.3: Key Bug Fixes and User Experience Enhancements for Windows

The AnyDesk update released on October 20, 2025, version 9.6.3 for Windows, brings a host of important bug fixes and enhancements.

Among the bug fixes, an issue that caused the application to crash when using the TCP tunnel has been resolved. Additionally, the German translations in the unattended access password dialog have been improved, providing a more seamless experience for users who prefer that language. Furthermore, a problem that occurred when accepting connections from local users has been fixed.

On the user interface front, a notable change is that the user image and username will no longer be displayed in the settings.

These enhancements aim to optimize both the stability and overall user experience on the platform.
