AnyDesk Update April 2025: New Features, Multi-Monitor Support & Performance Enhancements

Summary of New Features and Bug Fixes in the AnyDesk Update (April 3, 2025)

The latest update of AnyDesk, version 9.5.0 for Windows and 6.4.3 for Linux, brings an impressive array of new features that enhance the overall user experience. One of the standout additions is the ability to display multiple monitors within a single session. This functionality significantly improves user workflow by facilitating better management of multiple screens, making it an ideal solution for professionals who rely on multitasking.

Additionally, the update introduces the AnyDeskOne feature, which can now be easily enabled through MyAnyDeskII. For those interested in harnessing the capabilities of this innovative tool, further information is available on the provided website.

While specific bug fixes have not been detailed in this release, the introduction of these new features promises to optimize the application’s performance across various environments. Users can look forward to a more seamless and efficient experience as they navigate their remote desktop needs.
