Bug Fixes:

What's New in AnyDesk (Update February 12, 2025)

Version 9.0.0 for macOS:

New Features:

- Introducing **AnyDesk Assist**: This innovative feature is designed to enhance your remote assistance experience, making it more efficient and user-friendly.
- A new IME editor has been added to streamline character input for Chinese, Korean, and Japanese languages, allowing for smoother interaction.
- Users can now easily copy and paste passwords during remote login sessions, increasing convenience and security.

Bug Fixes:

- Fixed an issue that was preventing the global AnyDesk service from starting on macOS 10.13 High Sierra.
- Resolved compatibility problems with CloudFlare WARP, ensuring seamless connectivity.

- Corrected display issues regarding full disk access permissions for a clearer user experience.
- Added an option in custom client settings to disable global service installation, giving users more control.
- Remote connections on macOS will now default to transferring images in Retina resolution, enhancing visual clarity.

Version 9.0.3 for Windows:

Bug Fixes:

- Addressed multiple crashes that could occur in different situations, such as when retrieving data from the news section or switching to the file manager during a session.
- Improved support for the Korean IME and enhanced mouse interaction capabilities with the main search feature.
- Resolved synchronization issues across windows and fixed a problem with the deletion of empty folders.
- Enhanced the function of closing the main menu when it loses focus and fixed various visual and user interface bugs.
- Fixed issues that hindered the proper opening of email clients and ensured compatibility with layouts in Windows 11.
- Improved localization for all supported languages by adding missing texts and enhancing consistency between light and dark themes.

These updates significantly enhance the usability and stability of AnyDesk across macOS and Windows systems, ensuring a smoother and more reliable user experience. Whether you’re providing remote assistance or managing connections, the latest features and fixes are designed with your needs in mind.
