AnyDesk Update - March 23, 2026: Enhancements and Bug Fixes

The March 23, 2026 update for AnyDesk (version 9.6.12 on Windows) brings a host of new features and bug fixes that enhance user experience and streamline operations.

New Features

- **Duplicate Entry Validation**: A new validation mechanism has been introduced to prevent duplicate entries in the address book. This ensures a cleaner and more organized interface for users managing their connections.
- **Redesigned Unattended Access Window**: The Unattended Access window has received a fresh redesign, making it more intuitive and user-friendly. This improvement allows users to navigate settings seamlessly without unnecessary clutter.
- **Address Book Functionality in AnyDesk One**: Users can now enjoy the address book feature in AnyDesk One, enabling easier management of contacts and quicker access to frequently used connections.

Bug Fixes

- **Group Policy Template Issue Resolved**: An issue that caused incorrect generation of templates for Group Policy has been fixed. This correction ensures that users can rely on accurate templates for their organizational needs.
- **License Key Registration Error Message**: A new error message has been added, which activates when trying to register a license key via the URL handler while being connected. This notification helps users avoid potential confusion during the licensing process.

Language Updates

Furthermore, the application translations have been updated to provide a more consistent experience for users around the globe.

Stay informed and enjoy the updated features and improvements in AnyDesk, making remote access quicker and more efficient than ever!
