AnyDesk Updates: Key Features and Fixes for iOS, macOS, Windows, Raspberry Pi, and Linux

TABLE OF CONTENT

- Platform-Specific Features and Fixes
- User Benefits

Last month, AnyDesk announced a series of updates across various platforms, including iOS, macOS, Windows, Raspberry Pi, and Linux. Here's a straightforward summary of the key features and fixes introduced:

Platform-Specific Features and Fixes

1. **iOS (Version 8.1.0)**
    - Enhanced frame rates on certain devices for a smoother experience.
    - User interface adjustments along with the removal of temporary files for better performance.
    - Reorganized settings for improved accessibility.
2. **macOS (Versions 9.6.4 and 9.6.5)**
    - Improvements to the automatic update verification process.
    - Introduced a new window for unattended access and a function to prevent duplicate entries in the address book.
    - Users are encouraged to update their operating system to continue receiving updates.
3. **Windows (Version 9.6.12)**
    - New functionalities in the address book and enhancements to the unattended access window.
    - Fixed issues related to template generation and error messaging for key registration.

4. **Raspberry Pi and Linux (Version 8.0.1)**
    - Added a search bar in settings and support for SNI in relay connections.
    - Resolved file management errors and IP display issues.
5. **Raspberry Pi and Linux (Version 8.0.0)**
    - Launched Remote Shell functionality along with a redesigned configuration window.
    - Improved keyboard transmission and fixed connectivity issues.

User Benefits

These updates deliver a range of advantages for AnyDesk users:

- **Enhanced User Experience**: With organized settings and the new search bar, users can effortlessly navigate the configurations and find what they need without hassle.
- **Improved Performance**: Enhancements in frame rates on iOS and bug fixes in connectivity contribute to a smoother and more efficient remote access experience.
- **Ease of Use**: New features, such as address book validation and file transfer monitoring, simplify daily tasks and help avoid confusion.
- **Secure Updates**: By notifying users about the end of support for older versions of macOS, AnyDesk assists users in staying updated and ensuring their security and functionality.

In summary, last month’s updates have made AnyDesk easier to use, more efficient, and more secure, benefiting users in their daily work routines.
