# AnyDesk Version 8.0.0 Update: Enhanced File Sharing, Performance Improvements, and Bug Fixes for Android

TABLE OF CONTENT

AnyDesk Update Summary - 01.04.2025

## AnyDesk Update Summary - 01.04.2025

**Version 8.0.0 for Android**

**What's New:**

- **File Sharing:** Users can now select AnyDesk as a destination for file sharing directly from other applications, enhancing convenience.
- **Page Size Support:** Added support for a 16k page size, catering to users with specific needs for larger documents.
- **Reorganized Settings:** The configuration options have been restructured to align with the AnyDesk version for Windows, making it easier for users to navigate.
- **Minor Improvements:** Various performance and usability enhancements have been implemented, ensuring a smoother user experience.

**Bug Fixes:**

- **"Add to Desktop" Function:** The functionality has been refined to allow users to add a shortcut directly to the home screen for Android 8 and newer versions, simplifying access.
- **Screen Capture:** A critical issue causing unexpected crashes when stopping screen capture has been resolved, enhancing reliability.
- **Session and System Information:** The interface for session and system information has been reorganized and improved for better clarity and usability.

- **Download Notifications:** An error that prevented updating download notifications has been fixed, streamlining user feedback.
- **Client API:** The client API now accurately reports version 7, ensuring users have the correct information at their fingertips.
- **Android 15 Issues:** Multiple issues that affected this operating system version have been addressed, improving overall compatibility.
- **Minor Fixes:** Additional tweaks have been made to enhance stability and performance further.

This update brings significant enhancements in usability and functionality, ensuring a smoother and more efficient user experience for all. Stay tuned for more updates, as AnyDesk continues to evolve to meet your needs!
