AnyDesk Version 8.1.0 Update: Enhancements and Bug Fixes for iOS Users

AnyDesk Update Summary - March 27, 2026

The release of version 8.1.0 for iOS brings notable bug fixes and enhancements that significantly improve user experience. One of the key issues addressed was the lower frame rate observed on specific devices, leading to smoother performance and more responsive interactions.

Furthermore, several tweaks and corrections have been made to the user interface, optimizing navigation and usability for a more seamless experience. The update also includes the removal of temporary files, which contributes to the overall performance of the application, making it faster and more efficient. Lastly, the restructuring of the settings tree has been implemented, making it easier for users to access various available options.
