Latest AnyDesk Update: Version 9.0.5 for Windows Released on March 21, 2025

The recent update of AnyDesk, version 9.0.5, has been launched for Windows and brings a host of exciting new features alongside crucial fixes that enhance user experience and software stability.

New Features

- **Enhanced Session Control**: Users can now perform new actions during remote sessions, such as blocking the device, switching users, and logging out the current user—all with the appropriate permissions.
- **Automatic Session Closure**: A new configuration option for customized clients allows for the automatic closure of the acceptance tab at the end of a session, streamlining the user experience.

Bug Fixes

- **Stability Improvements**: Multiple issues that led to application freezes have been addressed. This includes problems occurring when closing a session during permission elevation requests,

pasting content without a selected panel using Ctrl+V, and updating the user interface in full-screen mode.
- **Resource Management**: Issues related to improper global resource management have been fixed, including cancellation problems when trying to establish new sessions and potential freezes tied to cursor updates.
- **Session Continuation**: Bugs that prevented a session from continuing after displaying content requiring elevated permissions have been resolved.
- **Terminal Server Detection**: Repairs have been made for correct detection of Terminal Servers based on Windows 11, as well as synchronization issues concerning permission profile statuses across different windows and during the login flow when entering an incorrect one-time code.
- **Command Line License Registration**: A glitch that hindered license registration via the command line when AnyDesk was not active has also been rectified.

Other Updates

- **Visual Enhancements**: The dark theme has received a makeover, providing a more aesthetically pleasing experience for users who prefer darker interfaces.

This latest update not only solidifies AnyDesk's functionality and stability but also significantly enhances user experience and session management. For further information and updates, be sure to follow AnyDesk updates.
