AnyDesk Update Summary - September 30, 2025

In the latest update, version 9.6.2 for Windows, AnyDesk has introduced a range of bug fixes and significant improvements, enhancing overall user experience.

Bug Fixes:

- Resolved user interface issues related to menu lighting in dark mode.
- Fixed sound muting problems.
- Corrected an issue with icon destruction.
- Addressed errors in date display within the chat log.
- Improved the password suggestion interface across various scaling levels.
- Fixed a crash that occurred when disabling the meeting plugin.
- Resolved an issue with meeting configuration.
- Enhanced the management of video enable/disable status.

Additional Improvements:

- Redesigned layouts for displaying dates and times for better clarity.
- Made adjustments to the meeting creation functionality.
- Implemented minor enhancements to the meeting plugin theme.
- Expanded video enable/disable management to additional panels.
