AnyDesk Version 9.7.14 Update: Key Bug Fixes and UI Enhancements for Improved User Experience

TABLE OF CONTENT

Bug Fixes

User Interface Enhancements

AnyDesk Update Summary - August 10, 2026

The latest release, version 9.7.14 for Windows, introduces a range of bug fixes and enhancements that enhance user experience. Key highlights include:

Bug Fixes

- **Frozen Camera Issue Resolved**: A significant problem where the local camera image would freeze upon resuming an AnyDesk One meeting from a suspended state has been addressed, ensuring smoother transitions during meetings.
- **Audio Functionality Restored**: An issue where audio would stop functioning when changing the audio output device mid-meeting has been fixed, allowing users to switch devices without interruption.
- **Application Stability Improvements**: Two critical bugs that caused the application to crash unexpectedly when deactivating it or when putting the meeting on hold have been resolved, greatly increasing reliability.

User Interface Enhancements

The UI of AnyDesk has received notable improvements, including updated translations. These refinements contribute to a more fluid and accessible experience for all users, making it easier to
