System requirements

Device compatibility:

- iOS 11.0 or newer
- iPadOS 13.0 or newer
- tvOS 11.0 or newer

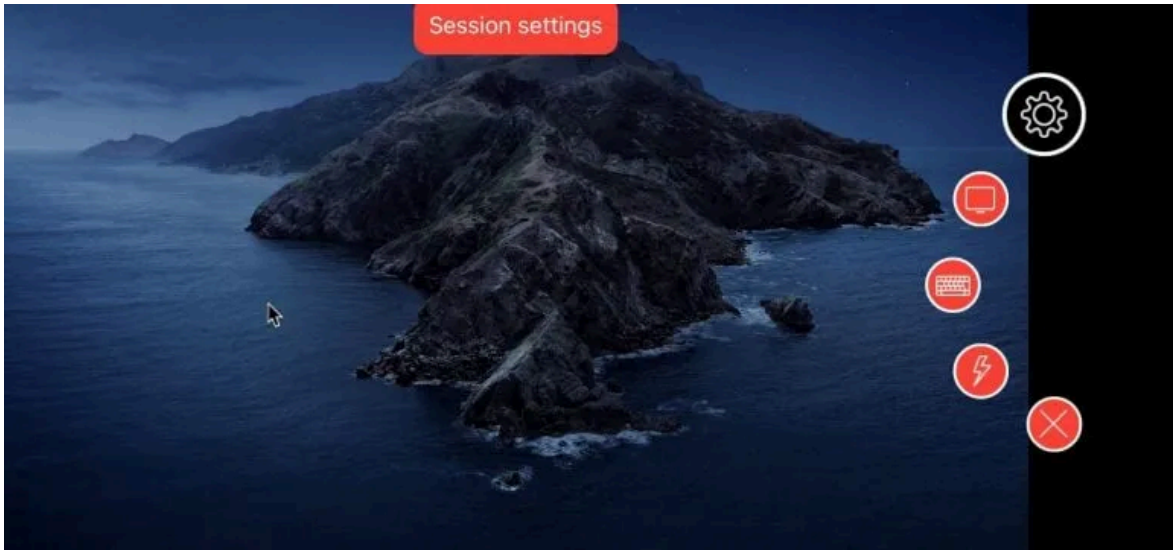

Remote view limitations:

- You can view iOS and iPadOS devices remotely from iOS 12.0 or newer.
- Remote viewing of tvOS devices is **not supported**.

> 🚨 **IMPORTANT**
>
> Due to platform restrictions, direct remote control of iOS, iPadOS, and tvOS devices is not available.
> Also note: Outgoing connections to iOS/iPadOS devices require a paid AnyDesk license.

Session menu

Swipe from either edge of your device's screen during a session to bring up the session menu.

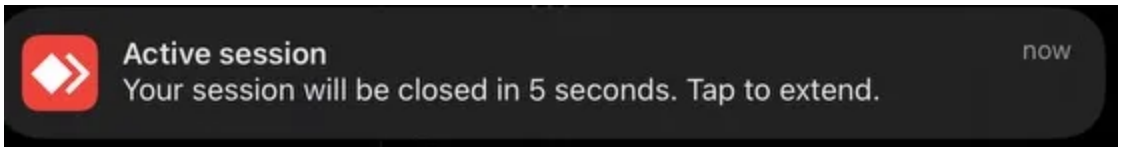

ios-settings-icon.png-768x359

From the menu's **Settings** icon, you can:

- Adjust transmission quality
- Enable or disable remote control

- Toggle clipboard synchronization
- Prevent the remote user from interacting during the session
- Choose input method: touch or touchpad
- Enable screen privacy mode
- Show or hide the remote cursor

Exiting the AnyDesk app on your iOS/iPadOS device will automatically close the session (“Your session will be closed in 5 seconds”).

Additional actions

- Switch between multiple monitors if the remote device has multiple displays
- Display the virtual keyboard, and toggle between standard and special input modes (e.g. F-keys, CTRL)
- Access features via the **Actions** menu:
    - Chat with remote user
    - Send `CTRL+ALT+DEL` (Windows devices)
    - Capture a screenshot
    - Request administrator rights elevation (UAC)
    - View system information of the remote device
    - Start or stop session recording

File transfer

File transfers and file browsing are available during sessions. For step-by-step instructions, see Manage and transfer files.

To report issues on iOS, iPadOS, or tvOS:

1. Open AnyDesk’s menu in the main window.

2. Tap **About AnyDesk.**
3. Choose **Open AnyDesk log.**
4. Tap **Send Email** (upper-right corner) and include a description with the trace files.
