Customized AnyDesk Clients

Available for users with an **Standard**, **Advanced**, or **Ultimate (Cloud)** license.

In the my.anydesk II management console, you have the opportunity to tailor your own AnyDesk client and share it with others. Builds are bespoke clients or custom AnyDesk applications, which can be crafted using the Custom Client Generator.

Overview | Build details

💡 If you want to learn how to create a custom client in the my.anydesk II management console, visit **Create a Custom Client**.

Overview

A Build is a personally configured client with your preset settings, which can be installed on one or multiple devices. This ensures that each device within your organization will have an AnyDesk client configured to meet your needs.

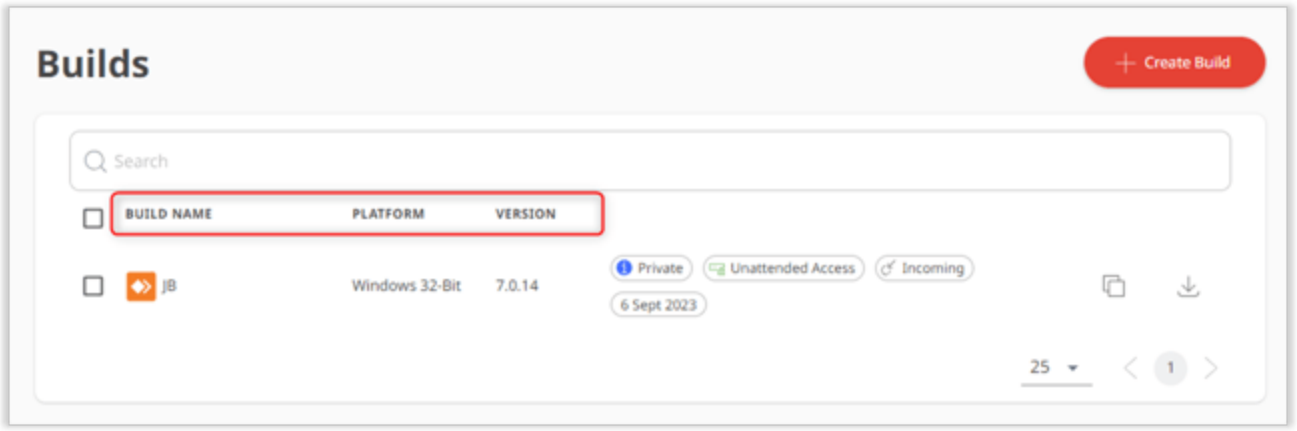

© 2026 www.somehelpwith.c

You can view all builds that you have created, or those created by others in your license, who have the permission to do so, in the **Builds** tab.

On the **Builds** page, you can view the following information for each custom build:

- **Build name** - the given name of the created build.
- **Platform** - the operating system for which the build was created.
- **Version** - the version of AnyDesk.

Build details

You can access the details of each build by navigating to the **Builds** tab and then clicking on the specific build from the list. Here, you can review the following information for each build:

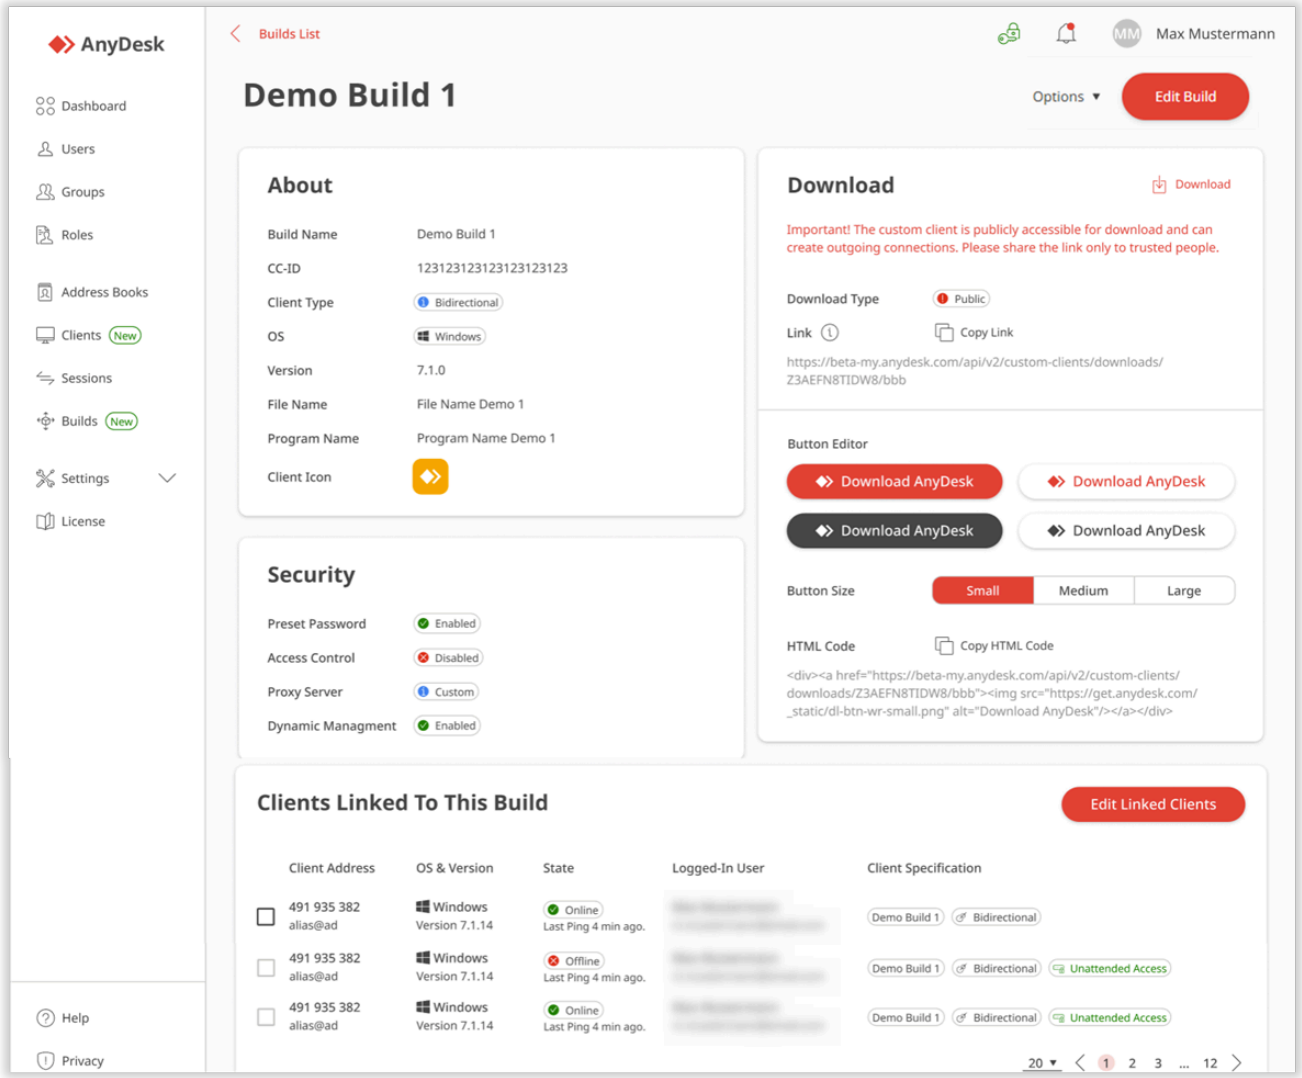

- **About** - displays the type of the client (incoming or outgoing, or bidirectional), for which operating system the build was created, the version of AnyDesk client, the name of the build, and more.
- **Security** - shows the security settings activated for the build, such as Access Control List, Unattended Access, Proxy Server, or Dynamic Management.

💡 For more information about Dynamic Management and how to use it, visit What is Full Client Management?

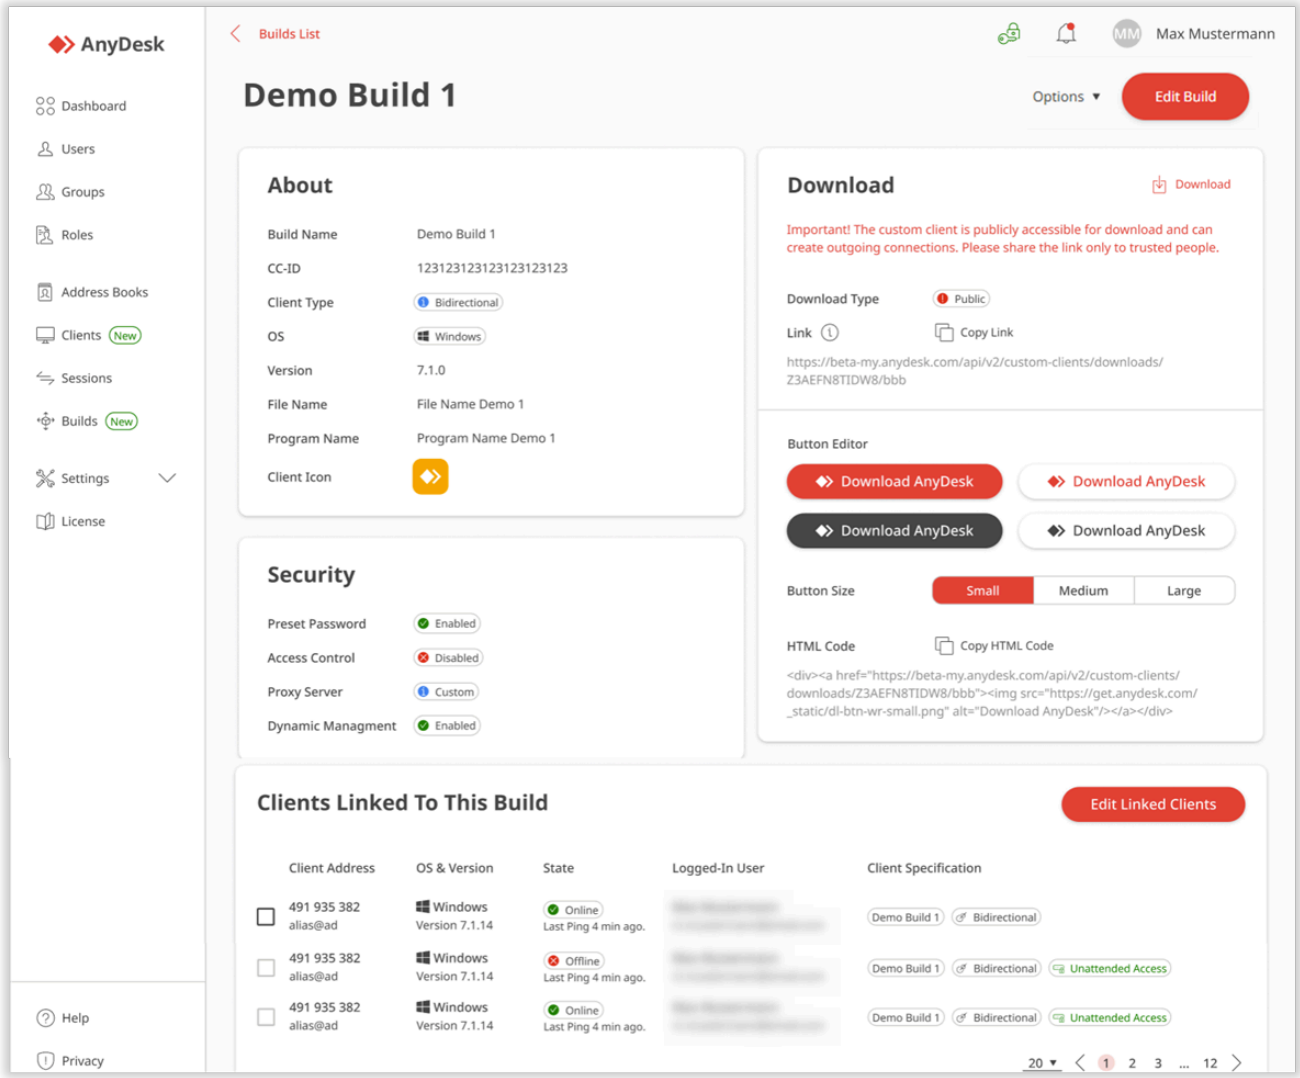

💡 To learn how to edit builds and see changes instantly on already installed clients, see **Manage Builds**.

- **Download** - includes the settings for downloading the build. You can easily share your custom configuration by copying () the URL and sharing it with others. If the **Download type** is *Private*, users will need to log in with a linked account to download. If it's set to *Public*, anyone with the link can download the custom client. To download the custom client to your device, click  . You can also customize the **Download** button's design.
- **Clients Linked To This Build** - shows a list of devices where the build has been installed.
