Fix AnyDesk Keyboard Issues on iPad: Page Up/Page Down as 'U' and Delete Key Problems

If you're using AnyDesk on an iPad and noticing that Page Up and Page Down keys are transmitting as 'U', and the Delete key is acting like Backspace-Ctrl while controlling a remote Windows PC, you're not alone. This is a known issue that affects some users, particularly with specific keyboard configurations.

Here are some helpful suggestions to resolve this issue:

1. **Check Keyboard Settings on iPad**: Ensure that the language and keyboard settings on your iPad align with those of the remote Windows computer. Misaligned settings can affect how keys are interpreted.
2. **Update AnyDesk**: Make sure you have the latest version of AnyDesk installed on both your iPad and remote PC. Updates frequently include enhancements and fixes for connectivity and key mapping issues.
3. **Reconfigure the Keyboard**: Try disconnecting and reconnecting your Bluetooth or USB keyboard to ensure it is properly paired with your iPad. You might also want to test with another keyboard to see if the issue persists.
4. **Use Keyboard Options within AnyDesk**: Within AnyDesk's settings, there are options to configure how keyboard inputs are handled. Be sure to check these settings and adjust them according to your needs.
5. **Technical Support**: If the problem continues after trying these suggestions, consider reaching out to AnyDesk's technical support. They can provide additional guidance and help you navigate a more detailed troubleshooting process for your device.

We hope these solutions enhance your experience with AnyDesk on your iPad. Feel free to leave us your comments and share your experiences!
