How to Configure AnyDesk Remote Worker for Remote Restart and Unattended Access

Of course! AnyDesk remote worker offers the same remote restart and unattended access features as other paid versions of AnyDesk, allowing the remote worker to restart the device and connect later without any issues. Just make sure to have the unattended access properly configured.

With the right configuration, it’s also possible for the worker to power off and power on the remote device. To do this, you need to set up the Wake-On-LAN function.
