Some Help With

How to Fix AnyDesk Permission Issues on Android 16: Troubleshooting Tips

Currently, many users have reported challenges while attempting to use AnyDesk on devices running Android 16, particularly regarding permission settings for remote control. Specifically, some users have observed that while activating certain permissions functioned properly on Android 15, this feature seems to have been impacted following the upgrade to Android 16.

If you find that the permission activation button in the AnyDesk app is not responding as expected, here are some solutions that might assist you:

1. **Check App Permissions**: Ensure that AnyDesk has all necessary permissions enabled in your device settings. Navigate to `Settings > Apps > AnyDesk > Permissions` and verify that all required options are activated.
2. **Update AnyDesk**: Keep your AnyDesk application up to date. Developers frequently release updates that fix bugs and improve compatibility with new Android versions. Check the Play Store for any available updates.
3. **Restart the App**: Sometimes, simply restarting the app can resolve temporary issues. Close AnyDesk completely and reopen it to see if this resolves the problem.
4. **Contact AnyDesk Technical Support**: If the above solutions do not work, we recommend reaching out to AnyDesk's technical support. They are best equipped to provide specific technical assistance and may have information about known issues with Android 16.

Technology advances rapidly, and it's normal for occasional issues to arise after updates. The AnyDesk community is continually working to enhance the user experience, so don't hesitate to seek help if you encounter problems.

We hope these suggestions help you resolve any difficulties you may have with Android 16 and AnyDesk. Your experience is important to us, and we appreciate your patience as improvements are made.
