If you're facing issues using AnyDesk on your Poco X6 Pro, where the connection is established but the screen of your device does not appear on your computer, there's no need to worry. Below is a helpful step-by-step guide to resolve this issue and ensure you can use AnyDesk seamlessly.

Steps to Set Up AnyDesk on Your Poco X6 Pro

1. **Check Internet Connection**: Ensure that both your Poco X6 Pro and the computer you're trying to access have a stable internet connection.
2. **Access Permissions**: Go to your device settings. Navigate to **Settings** > **Apps** > **AnyDesk** and ensure all necessary permissions are granted, especially screen access permissions.
3. **Allow Remote Access**: Open the AnyDesk application on your Poco X6 Pro and verify that the option to allow remote access is enabled. This is typically found within the app's settings.
4. **Security Settings**: Some devices have security features that may interfere with remote connections. Look in **Settings** > **Security** and check if there's any option or application blocking access to AnyDesk. If needed, add AnyDesk to the list of allowed applications.
5. **Update AnyDesk**: Make sure you have the latest version of AnyDesk installed. Head over to the Google Play Store and check for any available updates.
