# How to Fix Common Issues with the AnyDesk Whitelist Request Form

TABLE OF CONTENT

Common Issues When Filling Out the AnyDesk Whitelist Request Form

## Common Issues When Filling Out the AnyDesk Whitelist Request Form

If you are having trouble filling out the AnyDesk whitelist request form and find that the dropdown menu for selecting your location is empty, you are not alone. Many users encounter this issue, and here are some helpful tips to resolve it:

1. **Check Your Internet Connection**: Ensure that your internet connection is stable. An unstable connection can sometimes lead to loading issues when submitting online forms.
2. **Try a Different Browser**: While you may have already tested with Firefox and Edge, consider disabling your browser extensions or trying an incognito window. Extensions can occasionally interfere with the proper functioning of web pages.
3. **Clear Cache and Cookies**: Clearing your browser's cache and cookies can often resolve issues related to loading outdated data that prevents web applications from working correctly.
4. **Disable Ad Blockers**: If you are using an ad blocker or security software, temporarily disabling it may help, as these tools can sometimes interfere with form content loading.
5. **Contact AnyDesk Support**: If the problem persists after trying these solutions, we recommend reaching out directly to AnyDesk support. Providing them with details about your issue can help them assist you effectively.

It's important to remember that such issues can be frustrating, but they are usually solvable. Patience and a willingness to try different approaches are key. If you have further questions or need additional assistance, don't hesitate to get in touch with the support team.
