How to Fix Keyboard Input Issues in AnyDesk on iOS: Common Problems and Solutions

TABLE OF CONTENT

- Common Issues and Solutions
- Conclusion

Hello everyone! When using AnyDesk on iOS devices, you may encounter some challenges, particularly related to text input. One common issue reported by users is the appearance of additional characters, such as the “=” sign, when typing on a remote PC through AnyDesk.

Common Issues and Solutions

When connecting your iOS device to a computer using AnyDesk, you may find that pressing certain keys results in extra characters being added. This is not unusual and has been a topic of discussion among the AnyDesk user community. Here are some suggestions to help you resolve this issue:

1. **Check Keyboard Settings**: Ensure that the keyboard settings on your iOS device are correctly adjusted. Sometimes, an improperly configured keyboard can cause this problem.
2. **Update AnyDesk**: Make sure you are using the latest version of AnyDesk. Updates often include bug fixes and performance improvements that can enhance your experience.
3. **Stable Internet Connection**: An unstable connection can contribute to input issues. Ensure that you have a strong internet connection to avoid interruptions in keyboard transmission.
4. **Restart the Application**: Close and reopen the AnyDesk application. A simple restart can often resolve temporary issues.
5. **Support Forums**: If you continue to experience problems, we recommend visiting the AnyDesk support forums. There, you can find solutions that other users have found helpful or share your own experiences to assist others.
