Maximize Your Foldable Smartphone Experience with AnyDesk: Tips and Troubleshooting

Hello everyone,

If you're a user of a foldable smartphone and want to maximize your experience with AnyDesk, here are some helpful tips to enhance your usage.

1. **Full-Screen Adjustment**: To ensure that your device fully utilizes its 8-inch display, first check if you have the latest system update installed. Then, navigate to the settings of AnyDesk, where you will find an option to adjust the display. Enable the full-screen mode to eliminate the black bars at the top and bottom. This should provide a much more immersive visual experience.

2. **Audio Issues with Teams**: If you're experiencing difficulties with audio transmission from your smartphone to a laptop using Microsoft Teams, here are a couple of steps to troubleshoot the issue:

    - Ensure that your phone's microphone is enabled in the AnyDesk settings. This is crucial for audio to transmit correctly.
    - Check the Teams settings within the app. Make sure that the audio input device is set to use your smartphone's microphone.
    - If you can hear audio but cannot transmit it, it may also be helpful to restart both applications and attempt the connection again.

These tips should help you improve your experience with AnyDesk on your foldable smartphone. Feel free to share additional suggestions or ask questions in the forum. We're here to assist you!
